Your abstract should go here. A few things should be noted:

- Graphicx should be provided as **PDF, JPG** or **PNG** files;

- maximum length one page (including references);

- rename your file according to the scheme 'euromech597_First_Last.tex';

- in order to compile use the TeX file 'euromech597_abstract_main.tex'; therein, modify the command \input by setting the above file name; compile using PDF LATEX

- if you don't have the uarial font package installed, simply comment it (note the final version will be compiled using that font)

References are best used via the command '\abstractref' [1]. Figures can be cited via '\figureref' Fig. 1
